WATER INDUSTRY '81— International Congress

Water Industry '81, the International Conference and Exhibition for the water supply, wastewater treatment and river management will be held at the Metropole Convention Centre, Brighton, UK from 15-19 June 1981. The President for the first Congress, to be held in the UK, is Mr Hugh Fish, Chief Executive of the Thames Water Authority.

The Conference and Exhibition is designed specifically to facilitate interaction between manufacturers, suppliers, operators, designers, researchers and personnel responsible for water cycle management, in a single event at International level.

The Conference will focus on current international activities in industrialised and developing countries reflecting the impact of new developments in the Water Industry. Leading authorities will present an outline of the international scene, highlighting major areas of concern. This will be supplemented by contributed papers representing the views of governments, industry, water authorities, organisations responsible for water/wastewater treatment, water supply/distribution and research organisations active in this field. The Conference will be under the Chairmanship of Dr. Roger Perry of Imperial College, London, with a board of technical representatives from industrialised and developing countries. Themes for the Conference will cover water resources—conservation and development, water supply—distribution and treatment, water quality and health, sewerage and sewage treatment, sludge treatment and disposal, industrial waste treatment and control, process technology development, monitoring and instrumentation, river quality management, fisheries and recreation.

A major International Exhibition will be held in association with the Conference. The Exhibition will be devoted exclusively to products and services available within the Water Industry. Only those manufacturers, suppliers and related organisations serving the Water Industry will be invited to participate.

The Exhibition will cover all products and services related solely to water and will provide large and small organisations operating within the industry the opportunity to reach a large international audience.

The Exhibition will feature the latest techniques, processes, equipment systems, instruments and products available in the international marketplace for the distribution, treatment and overall management of water and wastewater.

Further information concerning the Conference and Exhibition is available from the Congress secretariat:
