

EDITORIAL

In the editorial in the March 1983 issue we noted the support we had received for the journal from the authors of the many manuscripts submitted for publication. In the past year this support has further increased, not only from North America but from authors in many countries around the world. Consideration of such manuscripts has involved a steadily increasing load on our editorial advisers, most of whom have been associated with the journal since its original inception more than five years ago.

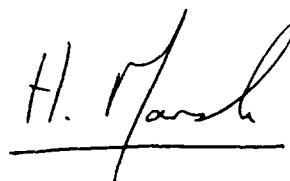

In order to avoid prolonged overburdening of our colleagues, it has seemed appropriate to introduce a measure of rotation, so that henceforth service will be based on a three year term, which may be renewed taking account of the wishes of the individual. This process, which could only successfully be implemented by replacing the original two tier structure with a single category on Advisory Editors, and which has been facilitated by the ready co-operation of all concerned, is reflected in the new format on the inside cover page. It is our particular pleasure to welcome to the journal:

R. Adrian, University of Illinois
R. Eichorn, University of Houston
J. Lloyd, Michigan State University
F. W. Staub, General Electric Company
K. Suzuki, Kyoto University
M. Yovanovich, University of Waterloo

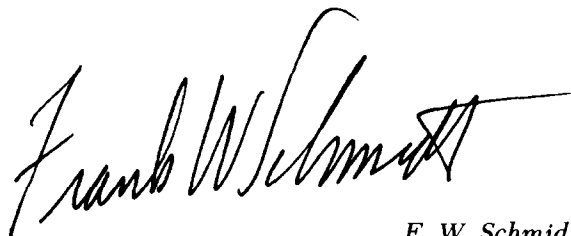

We would not want to conclude this editorial without expressing our appreciation and gratitude to those who have served the journal so well over the years.

B. W. Martin

H. Marsh

F. W. Schmidt
