CRYOGENICS

A monthly journal to keep you in touch with developments in the low temperature field.

Cryogenics is the international journal of low temperature research and engineering. The subject matter covers the complete field of science below -100°C . This includes low temperature plant technology, cryosurgery, train suspensions and superconducting motors. Each issue contains specially commissioned review articles and original papers. Complimentary to these are research and technical notes describing preliminary results and details of work in progress, and letters to the editor on areas of discussion and controversy.

Other features include reports on conferences, book reviews and a lively news section covering the cryogenics industry. The quality of the editorial is ensured by a distinguished board of international editors.
