

ANNOUNCEMENT

AN INVITATION TO SUBSCRIBE TO THE ALL-UNION "JOURNAL OF ENGINEERING PHYSICS"

The Journal is published monthly and contains results of scientific investigations in physics which are of importance for modern technological development.

The main subjects covered are thermodynamics of irreversible processes and its application to the phenomena of energy and substance transfer taking place during physical, chemical and nuclear transformations; heat and mass transfer in the jet rocket mechanisms and in nuclear reactors; heat and mass transfer in the process of combustion, gasification and drying; theory of heat conduction; the mechanics and physics of ground, construction heat physics.

Together with methods of investigation used in mathematics and experimental physics, engineering and

technological methods of solving these problems are discussed.

The Journal also contains reviews of current questions of modern science and technology, news on the most important events in the scientific world in the U.S.S.R. and abroad as well as bibliography and discussions.

The Journal is intended for broad sections of scientific workers of Research Institutions, Higher Educational Institutions, Designing Organizations, Plant Laboratories, for post-graduates and students.

The Journal is published in Russian, summaries of all main articles are given in English.

Subscription to the Journal is taken through "*Mezh-dunarodnaya Kniga*".
