Table of contents

WORKSHOP FINDINGS 1047
Abstract 1047
1. A road map for scientific understanding of multiphase flow 1048
2. Dilute disperse flows 1049
  2.1. *Phase configurations* 1049
  2.2. *Particle tracking* 1050
  2.3. *Eulerian methods* 1051
3. Gas–liquid flow regimes 1051
  3.1. *A problem in complexity* 1051
  3.2. *Quasi fully-developed flows* 1052
  3.3. *Flow regime transitions* 1053
  3.4. *New issues introduced in mixing flows* 1053
  3.5. *Numerical experiments* 1054
  3.6. *Averaged conservation equations* 1054
4. Concentrated solid–fluid systems 1055
  4.1. *Concentrated 'fluid-like' solid–fluid suspensions* 1055
  4.2. *Dense 'solid-like' systems* 1055
5. Microphysics 1056
  5.1. *Identification of important microphysics* 1056
  5.2. *Coalescence and breakup* 1056
  5.3. *Altering the behavior of a multiphase system* 1057
  5.4. *Contact lines* 1057
  5.5. *Nucleate boiling* 1057
  5.6. *Heat transfer in microchannels* 1058
6. Closure 1058
Acknowledgements 1059
References 1059

APPENDIX 1—Report of Study Group on Flow Regimes in Multifluid Flow 1061
Abstract 1061
1. Introduction 1061
2. An overall view 1062
3. Steady, fully-developed, adiabatic flows 1063
  3.1. *Phase distribution in annular flow* 1064
  3.2. *Slug formation and dynamics* 1065
  3.3. *Transition from disperse to intermittent flow* 1065
  3.4. *Phase distributions in bubbly flow* 1065
4. Mixing flows 1066
5. Simulations: approaches and issues 1067
6. Concluding remarks 1068
References 1068

doi:10.1016/S0301-9322(03)00109-5

APPENDIX 2—Report of Study Group on Disperse Flow 1069
Abstract 1069
1. Introduction 1069
2. Dilute particle laden flows 1070
2.1. *Large-eddy simulations* 1071
2.2. *Fluid–particle interactions* 1072
2.3. *Particle–particle interactions* 1072
2.4. *Turbulence modification by particles* 1072
2.5. *Transition to turbulence* 1074
3. Concentrated "fluid-like" suspensions 1075
3.1. *Derivation of equations of motion and constitutive equations* 1075
3.2. *Instabilities of multiphase flows* 1077
4. Dense "solid-like" particulate systems 1080
4.1. *Interaction of time scales* 1081
4.2. *Role of particle spin and frictional interactions with boundaries* 1081
4.3. *Mixing and segregation* 1081
5. Concluding remarks 1083
References 1084

APPENDIX 3—Report of Study Group on Computational Physics 1089
Abstract 1089
1. Introduction 1089
2. Numerical methods 1091
3. Complexity 1092
4. Conclusions 1094
5. Overview of the individual contributions 1095
References 1097

APPENDIX 4—Report of Study Group on Microphysics 1101
Abstract 1101
1. Introduction 1101
2. Critical scientific issues 1103
2.1. *Boiling nucleation* 1103
2.2. *Contact lines* 1105
2.3. *Microchannels* 1106
2.4. *Breakup and coalescence* 1108
2.5. *Effects of surfactants on interfacial flows* 1110
2.6. *Drag reducing polymers* 1112
3. Conclusion 1113
References 1114
