### Erratum

In the article 'Equilibrium binding studies of the interaction between anthralin and bovine serum albumin' by S.M. Upadrashta and D. Eric Wurster, *International Journal of Pharmaceutics*, 49 (1989) 103–108, two lines have been omitted inadvertently from the last paragraph of the section 'Results and Discussion'. The complete paragraph should read:

In conclusion, the results obtained using an accurate and sensitive fluorescence spectroscopic technique revealed that anthralin did not interact with deoxyribonucleic acid but formed a 1 : 1 complex with bovine serum albumin. The binding constant for this complex was determined to be  $1.01 \times 10^6 \text{ M}^{-1}$  and the binding process was primarily enthalpy driven. It is postulated that hydrogen bonding is responsible for the interaction.
