Cutaneous Microdialysis Club

The use of microdialysis for investigation in the skin is a rapidly expanding field of research. In order to facilitate contact between international study groups who use microdialysis to investigate the skin and the subcutaneous tissues, the Cutaneous Microdialysis Club was founded on April 22, 1997.

The aim of this non-profit Society is to promote the knowledge of the technique, to promote standardisation and validation of cutaneous microdialysis instruments, dialysate analysis and data interpretation.

The Society covers a variety of fields of interest in microdialysis: pharmacokinetics, percutaneous absorption, allergology and inflammation, neurotransmitters, immunology, endocrinology and methodology.

The Society has members from 12 countries and will hold scientific meetings on selected topics on a regular basis.
