

ANNOUNCEMENT

5TH SYMPOSIUM ON THE UNIFICATION OF FINITE ELEMENTS, FINITE DIFFERENCES AND CALCULUS OF VARIATION

University of Connecticut, Storrs, U.S.A.

2 May 1980

The 5th symposium like its predecessors is a one-day gathering during which only invitational presentations take place. The main theme of the symposium is to present the recent advances in various numerical methods and by emphasizing the analogy between them to point out cases where they can be merged to ease the solution or to attain improvement at the results. A panel discussion usually concludes the symposium and a bound volume of conference proceedings is distributed to the participants. For further information contact:
