

ANNOUNCEMENT

IUTAM SYMPOSIUM ON NONLINEAR STOCHASTIC DYNAMICAL ENGINEERING SYSTEMS

Igls (Innsbruck), Austria, 21–26 June 1987

The purpose of the symposium in a row with the previous meetings at Southampton 1976, Frankfurt/Oder 1982 and also Stockholm 1984 is to provide an opportunity of exchanging ideas of researchers active in the area of probabilistic methods applied to dynamical engineering systems. The special emphasis at this symposium will be on *Nonlinear Effects* in the models of loads, strengths and structures. Applications should cover mainly the fields of civil and mechanical engineering including nuclear energy, vehicle, flight and machine dynamics.

Participation is by invitation only. Deadline for extended summaries (2–3 pages) is 12 June 1986. The proceedings of the symposium will be published by Springer Verlag. For further information contact the scientific committee:

V. V. Bolotin, U.S.S.R.; K. Hennig, D.D.R.; Y. K. Lin, U.S.A.; J. Salencon, France; F. W. Schiehlen, B.R.D. Co-chairman G. I. Schuëller, Austria; E. H. Vanmarcke, U.S.A. Co-chairman F. Ziegler, Technical University of Vienna, Karlsplatz 13, Vienna, A-1040, Austria.
