INTERNATIONAL CONFERENCE ON COMPUTATIONAL METHODS IN STRUCTURAL AND GEOTECHNICAL ENGINEERING

12–14 December 1994

The development and application of computational methods in engineering have achieved remarkable progress in the last 30 years. The conference aims to bring together engineers and scientists with interest in the application of computational methods in structural and geotechnical engineering. It is hoped that the conference can serve as a forum for the exchange of ideas and experiences related to research and practice in this field and to consolidate recent developments.

The theme of the conference is "From Theory to Practice". World renowned experts from both the academic institutions and practising offices will present the state-of-art developments in computational methods, expert systems and computer applications in buildings and bridges, foundations, slopes and embankments and other underground constructions. The official language for the conference is English.

More than 300 papers have been accepted for presentation at the conference by authors from over 30 countries. For details of the conference and registration form, please contact :

Mr P. K. K. Lee
Conference Secretary
