KEYWORDS

International Journal of Solids and Structures has traditionally contained author indexes and contents lists at the end of each year. Useful though these are, we believe that they would be enhanced by the addition of indexes compiled from keywords associated with each paper. This would allow readers to identify groups of papers in similar areas.

In an electronic environment, the need for a uniform keyword system is particularly important to facilitate effective information search and retrieval. To ensure a consistent approach we have prepared a list of **preferred** keywords for use. This list is not exhaustive and should be used as a guideline. If you feel there are serious omissions please do not hesitate to contact the Editor-in-Chief or Publisher to ensure that new terms are added.

Absorption Compliance composite Dynamic
Acoustic Composite materials Eigenvalues
Adaptive structures Compression Elastic

Adhesion Computational conical Elastic-plastic Ageing of materials Concentration Elasticity Algorithms Concrete Elastoelasticity Alloy Consolidation Elastomers Constitutive Anisotropic Elastoplasticity Arches Contact Energy methods Asymptotic Containment structures Energy release rate Euler-Bernoulli beam Axially Continuum Axisymmetric Control Experimental techniques

Ballistics Converging Explosions
Bar Cosserat Failure
Beam Crack Fastening
Bending Crack arrest Fatigue
Biaxial Crack-tip Fibre reinforced

Bifurcation Creep Finite deformation Biharmonic equation Cross-section Finite differences **Bimaterial** Cross-ply Finite element **Biomechanics** Crystals Flexure Bonded Cyclic Flow-rule Bone Cylinder Flutter
