Keywords

International Journal of Solids and Structures has traditionally contained author indexes and contents lists at the end of each year. Useful though these are, we believe that they would be enhanced by the addition of indexes compiled from keywords associated with each paper. This would allow readers to identify groups of papers in similar areas.

In an electronic environment, the need for a uniform keyword system is particularly important to facilitate effective information search and retrieval. To ensure a consistent approach we have prepared a list of **preferred** keywords for use. This list is not exhaustive and should be used as a guideline. If you feel there are serious omissions please do not hesitate to contact the Editor-in-Chief or Publisher to ensure that new terms are added.

Absorption Buckling Acoustic Cables Adaptive structures Cantilever Adhesion Ceramics Chains Ageing of materials Algorithms Chaos Coastal structures Alloy Anisotropic Collocation Arches Column Asymptotic Compaction Axially Complex variable Axisymmetric Compliance composite **Ballistics** Composite materials Bar Compression Beam Computational conical Bending Concentration
