## Keywords

*International Journal of Solids and Structures* has traditionally contained author indexes and contents lists at the end of each year. Useful though these are, we believe that they would be enhanced by the addition of indexes compiled from keywords associated with each paper. This would allow readers to identify groups of papers in similar areas.

In an electronic environment, the need for a uniform keyword system is particularly important to facilitate effective information search and retrieval. To ensure a consistent approach we have prepared a list of **preferred** keywords for use. This list is not exhaustive and should be used as a guideline. If you feel there are serious omissions please do not hesitate to contact the Editor-in-Chief or Publisher to ensure that new terms are added.

Absorption Acoustic Adaptive structures Adhesion Ageing of materials Algorithms Alloy Anisotropic Arches Asymptotic Axially Axisymmetric **Ballistics** Bar Beam Bending Biaxial Bifurcation Biharmonic equation **Bimaterial Biomechanics** Bonded Bone Boundary conditions Boundary element Boundary value Branching Brittle

Buckling Cables Cantilever Ceramics Chains Chaos Coastal structures Collocation Column Compaction Complex variable Compliance composite Composite materials Compression Computational conical Concentration Concrete Consolidation Constitutive Contact Containment structures Continuum Control Converging Cosserat Crack Crack arrest Crack-tip

Creep Cross-section Cross-ply Crystals Cyclic Cylinder Damage criteria Damping Debonding Decay Decomposition Deformable bodies Delamination Design Diffraction Dipole Discontinuities Disk Dislocations Dispersion Displacement Diverging Dynamic Eigenvalues Elastic Elastic-plastic Elasticity Elastoelasticity
