It is regretted that the signs of the pyroelectric materials constants were found to be incorrectly displayed after publication of the above article. This error was caused by intermingling different notation systems, which are not unique in the literature.

Actually, in our article, all calculations were performed with the value $\gamma_3 = +13.3 \times 10^3 \text{ V m}^{-1} \text{ K}^{-1}$, i.e. the negative sign in Table 2 has to be replaced by the positive sign. Correspondingly, the resulting pyroelectric constants in Figs. 7 and 8 come out as positive values. Except for this sign exchange, all the curves shown in the figures remain unchanged.
