

The Digital Perspective

“The Digital Perspective” workshop, from which the material for this special issue originates, was held on July 24–26, 2001, at the headquarters of the NSF, 4201 Wilson Blvd, Arlington, Virginia. The workshop, organized by Ed Fredkin, Distinguished Career Professor at Carnegie Mellon University, was devoted to the conceptual strategy of looking at physics in terms of digital processes.

The workshop would not have been possible without the sponsorship of the National Science Foundation and the active organization and coordination on the part of the American Federation of Scientists—here gratefully acknowledged.
