

ANNOUNCEMENT

**Eleventh Symposium on Thermophysical Properties
National Institute of Standards and Technology
Boulder, Colorado, U.S.A.
June 23–27, 1991**

This is the Eleventh Symposium of the well-established series of conferences organized by the Committee on Thermophysical Properties of the Heat Transfer Division of the American Society of Mechanical Engineers. The Symposium is concerned with theoretical, experimental, and applied aspects of thermophysical properties for gases, liquids, and solids. Some of the appropriate topics are: thermodynamic, transport, thermal radiative and interfacial properties and data correlation. Special topics included in the Symposium are: equilibrium and non-equilibrium thermodynamics, properties of new materials, fluid mixtures and condensed matter at extreme conditions, new experimental techniques, and computer simulation.

Prospective authors should submit abstracts (200–300 words) to one of the cochairmen listed below before December 31, 1990. The content of the abstract will be the basis for acceptance of the paper for presentation in the symposium. Papers are to be submitted by June 23, 1991. They will be reviewed and those accepted will be published in the Symposium Proceedings.
