ANNOUNCEMENT

NUMERICAL METHODS IN INDUSTRIAL FORMING PROCESSES

2nd International Conference, Gothenburg, Sweden, 25-29 August 1986

The objective of the second conference is to establish the state of the art, with respect to research and practice, for numerical methods in forming processes. The conference will be broadly based including numerical techniques and applications in different materials. Metal forming operations are, e.g., extrusion, drawing, rolling, forging, casting, and sheet forming. Examples of polymer operations are extrusion, injection, moulding, blow moulding, wire coating, calendering, coating, and spinning. For further information, please contact
