Journal Founder Professor Cedric Taylor, Emeritus Editor

In 1980 Professor Cedric Taylor, University of Wales Swansea, U.K., founded the *International Journal for Numerical Methods in Fluids*, having identified a pressing need for the dissemination of research findings in this area. In Phil Gresho, he found an enthusiastic Editor to work together with him on this Journal. The Journal was launched successfully and steered by these two Editors for 20 years. Recently, Nigel P. Weatherill, University of Wales Swansea, U.K., came on board as a third Editor to take over the baton from Cedric Taylor, as Cedric expressed his wish to retire as Editor from the Journal at the end of 1999, just before the Journal went into its 20th successful year.

A farewell dinner party with the two current Editors took place in Swansea in December. Cedric Taylor has continued to work for the Journal during the first half of the year 2000, but is now enjoying full Emeritus Editorship.

The Editors and the Publisher wish Cedric Taylor a happy and healthy retired life.
