**PETROCHEMICAL INDUSTRY**

**and the possibilities of its Establishment in the Developing Countries**

C. MERCIER, *Industrial Applications Division, Institut Français du Pétrole*

The petrochemical industry is distinguished by its dynamism and rapidity of development. Its dynamism lies in the demands it has to face, and its rapid development concerns techniques as well as far reaching and rapid changes in its industrial structures and installations. Oil and gas: its raw materials, provide the incentive for the consideration of the possibilities of its establishment in the developing countries.

The contents are arranged as follows :

**Section I** The expansion of the petrochemical industry and the reasons for its rapid development; description and specific characteristics of the petrochemical industry; general economic conditions and basic principles – the bases for establishing a petrochemical industry; factors conditioning the creation of a petrochemical industry – ensuring limitations and means of remedying them.

**Section II** General conditions and main petrochemical routes; definitions and importance of the main products; present and future trends of petrochemical production; basic products of first generation petrochemicals; intermediate and end products or second generation petrochemicals; petrochemical end products; example of an integrated petrochemical complex.
