

Announcement

The International Quantum Logics Association, a society for the advancement and dissemination of quantum logics in its mathematical, philosophical, and physical aspects, including and not limited to

- the logicoalgebraic foundations of quantum physics
- empirical logics
- quantum epistemology
- quantum probability
- quantum set theory
- quantum-space-time
- quantum computation
- orthomodular structures
- fuzzy quantum logics
- quantum measurement theory
- quantum topology
- quantum communication

was formed by participants in the international meeting Quantum Logics Gdansk 1990, on September 15, 1990. Those interested in participating in, or being informed of, further developments or meetings of the IQLA should communicate with local members of the organizing committee or with the acting secretary.
