CONFERENCE

**13th European Conference on Thermophysical Properties
Lisbon, Portugal
August 28–September 1, 1993**

The 13th European Conference on Thermophysical Properties will bring together scientists and engineers in the fields of materials science and technology, solid-, liquid-, and gaseous-state physics and chemistry, advanced metrology, phase equilibria, and the environmental impact of new materials, in order to present and discuss recent research and development activities on thermophysical properties. The main topics are thermal conductivity and diffusivity, heat capacity, and thermal expansion and radiation properties of solids and fluids, as well as viscosity and mass and thermal diffusion coefficients, speed of sound, and surface and interfacial tension in fluids. Special emphasis will be placed on thermophysical research at high temperatures and in multiphase systems and its industrial applications.
