

Announcement

THIRTEENTH SYMPOSIUM ON THERMOPHYSICAL PROPERTIES

**National Institute of Standards and Technology
Boulder, Colorado, U.S.A.
June 22–27, 1997**

This is the Thirteenth Symposium in the well-established series of conferences on thermophysical properties. The symposium is concerned with theoretical, experimental, and applied aspects of the thermophysical properties of gases, liquids, and solids. Appropriate topics are thermodynamic, transport, thermal radiative and interfacial properties, and data correlations and predictions. Special topics of current interest are also included, such as energy and environmental engineering, advanced acoustic and optical techniques, supercritical fluids, process design, and new materials (composites, films, polymers).

Prospective authors should submit abstracts (200–300 words) to one of the cochairmen listed below before December 2, 1996. The content of the abstract will be the basis for acceptance of the paper for presentation at the symposium. Papers are to be submitted by May 1, 1997. They will be reviewed and those accepted will be published in special proceedings issues of the *International Journal of Thermophysics and Fluid Phase Equilibria*.
