REAGENT CHEMICALS, ACS Specifications

This 1955 edition, released January 1, 1956, now describes nearly 200 reagents. It incorporates the 10 additional specifications, the more than 200 changes in requirements, and the 60-odd revisions of test procedures published in the 1953 Appendix to the 1950 edition. It also includes 7 new specifications and a substantial number of changes in requirements and in test procedures reported since July 1, 1953.

As in previous editions, important properties and acceptable limits of usual impurities are given for each reagent. The approved test method for each property and impurity is presented in detail. Emphasis has been placed on revision of existing specifications rather than the development of new ones.
