CORRECTIONS

INHIBITION OF *CARPOPHILUS FREEMANI* DOBSON (COLEOPTERA: NITIDULIDAE) AGGREGATION PHEROMONE RESPONSE BY A *Z*-DOUBLE-BOND PHEROMONE ANALOG, by R. J. Petroski* and D. Weisleder. *J. Agric. Food Chem.* **1997**, *45*, 943−945.

Table 1 (below) was missing.

Table 1. Inhibition of Beetle Response to Aggregation Pheromone (*E*) by the 6*Z* Isomer (*Z*)

condition[a]			treatment effect[b]			
ng			mean counts			
E	*Z*	SYN	*E*	*E* + *Z*	% inh	*F*
0.13	0.13	Y	6	5	17	0.8
0.13	1.3	Y	32	17	47	10.1**
1.3	1.3	N	119	98	18	5.3*
1.3	1.3	Y	75	61	19	1.3
1.3	13.0	N	23	17	26	15.4**
1.3	13.0	Y	22	15	32	15.4**

[a] The synergist (SYN) was propyl acetate (20 μL, 1% solution in mineral oil); Y when present, N when absent. [b] Bioassay counts are the numbers of beetles flying upwind to the filter paper baits and alighting during the 3-min tests. Test samples containing both the natural pheromone (*E*) and the 6*Z*-isomer (*Z*) are designated *E* + *Z*. Percent inhibition (% inh) is defined as 100 × (mean counts *E* − mean counts *E* + *Z*)/mean counts *E*. *N* = 16. The symbol *F* is the *F* statistic. df: treatment = 1,14; position = 1,14. **, $P < 0.01$; *, $P < 0.05$. Average MSE (treatment × test) was 0.028 (range 0.010−0.055).
