

Meeting Announcement

The **6th International Symposium on Olfaction and Electronic Noses** will be held in Tübingen, Germany, Sept 20–22, 1999.

The **Olfaction and Electronic Nose Symposium** is an international conference dealing with recent scientific and technological advancements in the characterization and control of odors and volatile compounds using multisensor arrays and associated pattern recognition techniques.

The objectives of the technical conference are to present high-quality research and to promote the interaction of professionals for the advancement of practical odor characterization and the analysis of complex product variation.

An instrument exhibition of electronic multisensor devices and other instrumentation such as mass spectrometry-based multiparameter devices with applications in the field of rapid measurement and control (process and analytical) will be organized to complement the technical forum.
