

“Citation Classics” and Classic Citations in *JAFAC*

Thomson Reuters (formerly the Institute for Scientific Information, or ISI) tracks citation activity for scientific journals, papers, and authors. Their widely quoted index for journals, the Impact Factor, appears in May or June of each year, and is based upon the number of citations to papers published in years 1 and 2 that occurred during year 3. (For instance, the 2008 Impact Factor expresses the average number of times all of the papers published in a journal during 2006 and 2007 were cited during 2008) For *JAFAC*, the Impact Factor has increased fairly steadily over the past dozen years or so, from 1.43 in 1998 to 2.562 in 2008. We are pleased to see that this has occurred, especially considering the expanding number of manuscripts published in *JAFAC*, and ascribe it to the relevance, quality, and impact of work published in *JAFAC*.

Historically, *JAFAC* has published a number of manuscripts that receive high citations, and many of *JAFAC*'s authors are highly cited for their work, whether published in *JAFAC* or other journals. Some are classified as “Citation Classics”, a term used by ISI to designate top cited manuscripts in a subject area during the period 1977–1993. Citation Classics were no longer designated after 1993, but the concept can still be applied informally to manuscripts published after 1993. [When the idea first came into play, a citation classic was generally considered to be a paper that had been cited more than 400 times; however, for fields with fewer researchers, 100 citations might qualify as highly cited. (1) This was apparently true for the subject areas within the scope of *JAFAC* at the time.]

Eight *JAFAC* manuscripts were considered Citation Classics (2). One of these is particularly noteworthy because the total number of citations is now approaching 1000 (the most recent count as of November 2009 was 920). This paper, the most highly cited *JAFAC* paper to date, was authored by John E. Hodge and titled “Dehydrated Foods: Chemistry of Browning Reactions in Model Ecosystems”—a review that for the first time provided a “comprehensive organization of the reactions” involved in production of brown pigments in foods heated to moderate temperatures (3).

John Edward Hodge was a “distinguished carbohydrate chemistry and prominent member of the African-American community”, who spent much of his career as a scientist at the USDA's Northern Regional Research Center in Peoria, IL (4). (See *Advances in Carbohydrate Chemistry and Biochemistry*, Vol. 53, for a description of Dr. Hodge's life and career.) He authored or coauthored 70 scientific papers (5), several of which appeared in *JAFAC*, served as chairman of the ACS Division of Carbohydrate Chemistry, and was a member of many other scientific organizations. He was also a role model and mentor for young African-American college students, encouraging many to study chemistry and to enter into research careers in chemistry (4).

Two of the Citation Classics were authored or coauthored by John E. Casida, Professor of Toxicology and Entomology at the University of California, Berkeley. The two papers were Dorough and Casida, “Nature of Certain Carbamate Metabolites of the Insecticide Sevin” (6) and Casida, “Mixed Function Oxidase Involvement in the Biochemistry of Insecticide Synergists” (7).

Professor Casida has received numerous awards and educated a major segment of pesticide researchers worldwide during his distinguished career. His colleagues, students, and friends have organized a symposium in his honor, to be held during the 239th National Meeting of the American Chemical Society in San Francisco, CA, March 21–25, 2010.

JAFAC is proud to be associated with the accomplishments of Drs. Hodge and Casida and the many other *JAFAC* authors who have achieved prominence through citation of their work by their peers and colleagues. **Table 1** presents more recent authors/manuscripts with high citation counts that have been published in the past few years.

In general, Reviews and Perspectives are highly cited. This makes sense; because of the nature of Reviews and Perspectives, they are useful to authors as they introduce the concept of their manuscript, or place it in perspective, and so are often cited for this reason. *JAFAC*'s Reviews have received some special acknowledgments—an example is Hodge's paper on the browning reaction (3).

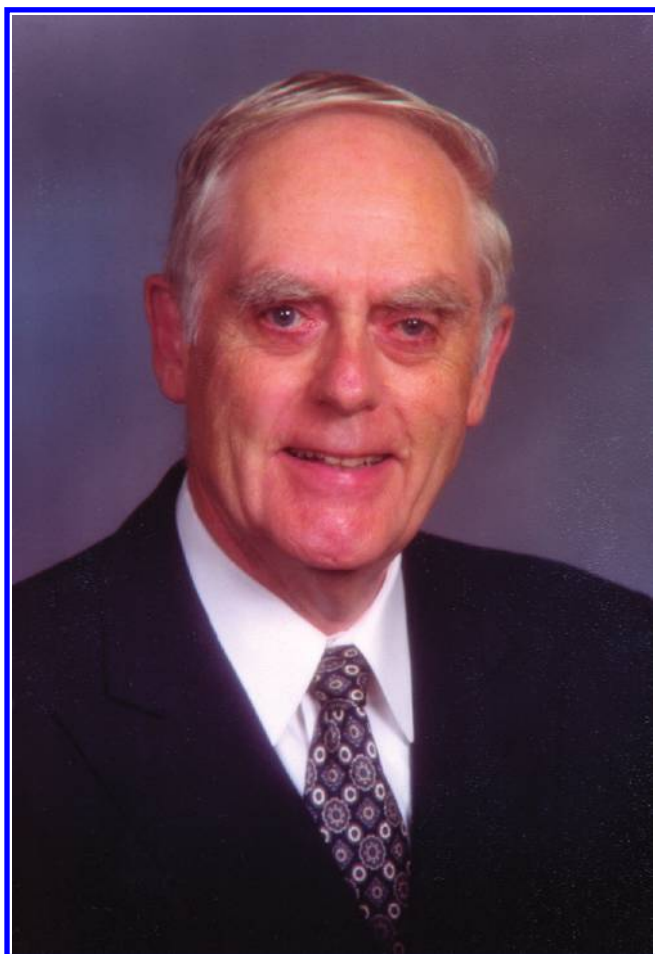

Clearly, we would love to have a crystal ball so we can call your attention to manuscripts being published now that make likely candidates as “citation classics” in years to come. The Associate Editors and I are grappling with some sort of metric to evaluate manuscripts published in the past year or two that are noteworthy in terms of their impact on the science of agricultural and food chemistry and on society. I would appreciate your suggestions.

I take this opportunity to salute Dr. Marshall Phillips for his contributions as Associate Editor to *JAFAC* for the past 22 years (**Figure 1**). In 1998, there were just two Associate Editors (Marshall and G. Wayne Ivie) serving with Editor Irvin E. Liener. Marshall continued to the present, covering the areas of food chemistry/biochemistry and composition of foods, in particular for foods of animal origin (meat, poultry, fish, and seafood) and with specializations in protein chemistry, biotechnology, food borne allergens, and a number of other areas. We will miss Marshall tremendously when he steps down as Associate Editor at the end of 2009. Sharon Martini served *JAFAC* as Assistant Editor in Marshall's office. We wish Sharon the best of success in her new position as Assistant Editor with the *Journal of Chemical Physics* (**Figure 2**). Many thanks to both Marshall and Sharon for their distinguished service to *JAFAC* and ACS Publications.

We also thank the more than 4700 scientists who served as reviewers for *JAFAC* (see the list that follows this editorial). Eleven of our reviewers returned 13 or more reviews within the 12 month period preceding our Advisory Board meeting and received plaques to honor their service to *JAFAC*. They are Chi-Tang Ho, Rutgers University, U.S.; Gow-Chin Yen, National Chung Hsing University, Taiwan; Takayuki Shibamoto, University of California—Davis, U.S.; Edna Amante, Universidade Federal de Santa Catarina, Brazil; Monica Loizzo, University of Calabria, Italy; Atsushi Kato, University of Toyama, Japan; Jose Luis Rios Canavate, Universidad de Valencia, Spain; Diego Moreno-Fernandez, CSIC—CEBAS, Spain; Michael Clifford, University

LIST OF REVIEWERS—2009

The Editor and Associate Editors gratefully acknowledge the following scientists for reviewing manuscripts during 2009. Many of these individuals reviewed several manuscripts. We thank all of the reviewers for their contributions of time and talent.

Note: This list reflects reviews received between November 15, 2008, and October 26, 2009.
