

To summarize, the contributions have provided to a clearly broadened basis for understanding processes and mechanisms in HTS. Appreciable progress has been achieved in the reproducible manufacturing of high quality materials supported by very efficient methods in microstructural analysis. This essential improvement is reflected in the increased number of practical devices encouraging use of HTS in applications for electronics and power engineering.

The Editors

Acknowledgments

The editors are sincerely indebted to the E-MRS for their support during the Conference and to Elsevier Science Publishers for the timely publication of these Proceedings. Financial support was kindly provided by Commission of the European Community, Pirelli Cavi Spa. Italy, Siemens AG and Hoechst AG, Germany.

Chairpersons :

J. Dumas (Grenoble, France)
H.W. Neumüller (Erlangen, Germany)
V.P. Seminozhenko (Kharkov, Ukraine)
Yu .D. Tretyakov (Moscow, Russia)
