

## Charles Tobias

The death of Charles Tobias early in 1996 deprived the electrochemical community of a distinguished scholar and a founding father in the field of electrochemical engineering. Tributes to the life and work of Professor Tobias have been published elsewhere and this journal, of which he was for many years a member of the Advisory Editorial Board, associates itself fully with these tributes. We

are now pleased to publish in this issue a review article entitled 'The rotating cylinder electrode: its continued development and application' dedicated to his memory.
