

CONTENTS OF NEXT ISSUE

PMM Vol.29, № 5, 1965

- R.F. NAGAEV: General problem of synchronization in an almost conservative system
- Iu.S. OSIPOV: On the principle of reduction of the stability of motion of systems with time lag in critical cases
- Ia.N. ROTTENBERG: On the construction of the Liapunov's functions for systems of linear equations in finite differences with variable coefficients
- V.A. BONDARENKO, N.N. KRASOVSKII and Iu.M. FILIMONOV: On the problem of bringing to rest a linear system
- V.D. ANDREEV: On the equations of unperturbed work of an inertial system which determines curvilinear coordinates
- V.I. ARNOL'D: Variational principle for three-dimensional stationary flows of an ideal liquid
- L.A. DIKII: On the nonlinear theory of hydrodynamic stability
- F.L. CHERNOUS'KO: Motion of a thin liquid layer under the action of gravity forces and surface tension
- G.D. SEVOST'IANOV: Plane near-sonic gas flow at a distance from a profile placed in a channel
- S.A. REGIRER and I.M. RUTKEVICH: The electric field in a magneto-hydrodynamic channel under the conditions of motion of a medium with variable electric conductivity
- B.D. ANNIN: Existence and uniqueness of the solution of the problem of elastoplastic torsion of a cylindrical bar of an oval cross section
- V.A. LONAKIN: On the deformation of micro-heterogeneous elastic bodies
- I.I. BOROVICH and V.F. ZIPALOVA: On the solution of nonlinear boundary value problems of the theory of elasticity by the method of a passage to the Cauchy problem
- V.K. PROKOPOV: Application of the symbolic method in deriving the equations of the plate theory
- A.I. LIKHODED: Steady-state vibrations of plates with free edges
- G.K. POZHARITSKII: Characteristic exponents of damped oscillations of mechanical systems with partial dissipation
- V.Ia. TURIN: Stability of the solutions of systems of differential equations with discontinuous right-hand sides in the critical case
- A.P. PROSKURIAKOV: Stability of single-frequency periodic solutions of quasi-linear autonomous systems with two degrees of freedom
- V.V. GURTSKII and B.S. FERTMAN: A problem of optimum control
- A.P. FROLOV: On the motion of a thin layer of a heavy liquid along the surface of a solid body
- V.A. SMIRNOV: The flow in a one-dimensionally widening layer and expulsion of a gas volume into vacuum
- E.D. TOMILOV: On the method of invariant transformations of the equations of gas dynamics
- B.V. ELISKEV: On the decay of homogeneous turbulence in a magnetic field
- V.N. MIKHAILOV: Interference between plane surfaces in hypersonic gas flow
- B.M. BULAKH: Shock waves in conical flows
- O.G. FRIDLENDER: Locally-Maxwellian solutions of the Boltzmann equation
