

JOURNAL OF APPLIED MATHEMATICS AND MECHANICS

CONTENTS OF NEXT ISSUE

Volume 56, No. 1, 1992

- A. P. IVANOV: Collision-free motion in systems with non-retaining constraints
- V. F. ZHURAVLEV: Singular directions in the configuration space of linear vibrating systems
- A. V. PECHENEV: The averaging of systems with a hierarchy of phase rotation speeds
- O. V. KHOLOSTOVA: The stability of a particular motion of a solid with a viscoelastic membrane in a circular orbit
- V. P. BOLDIN, S. B. MALANOV and G. A. UTKIN: Formulation of boundary-value problems for the dynamics of two-dimensional systems with moving loads and fastenings
- S. A. YEGORUSHKIN and A. G. KULIKOVSKII: The stability of the solutions of some boundary-value problems for hyperbolic equations
- A. I. BUNIMOVICH and A. V. DUBINSKII: Calculation of rotational derivatives for "local" interaction of a flow with the surface of a body
- N. A. GUMEROV: Quasi-monochromatic weakly non-linear waves in a low-dispersion bubble medium
- I. S. GINZBURG, V. M. YENTOV and E. V. TEODOROVICH: Renormalization group method for the problem of convective diffusion with irreversible sorption
- P. A. MAZUROV: A variational approach in theories of filtrational consolidation and two-phase filtration
- M. A. RVACHEV: Stress functions in multiply connected volumes
- Ye. L. NAKHMEIN and B. M. NULLER: Combined periodic combined boundary-value problems and their applications in the theory of elasticity
- V. D. POTAPOV: Stability of a viscoelastic rod subject to a random stationary longitudinal force
- A. A. YEVTUSHENKO and O. M. UKHANSKAYA: Non-stationary frictional heating in sliding compressible elastic bodies
- S. M. KOZLOV: On the domain of variation of added masses, polarization and effective characteristics of composites
- D. B. BALASHOV: Simple waves in Prandtl-Reuss equations
- M. ERGASHOV: A study of the propagation of elastic waves in wound structures taking into account their rotation under extension
- L. A. FIL'SHTINSKII and L. I. FOMENKO: The dynamic stress in a conducting half-space with a curvilinear cut in a strong magnetic field (antiplanar deformation state)
- V. V. BOLOTIN: On the dynamic propagation of cracks
- E. L. AMROMIN, A. N. LORDKIPANIDZE and Yu. S. TIMOSHIN: The introduction of "forbidden" amplitudes when calculating the wave resistance of a ship
- T. S. KAGADII, L. V. MASSAKOVSKAYA and A. V. PAVLENKO: The perturbation method in a spatial problem of linear viscoelasticity of anisotropic bodies
- Yu. B. NAZARENKO: The formation of subsurface rock breakdown zones around workings during their driving by drilling and blasting
