

Gel Permeation Chromatography Method for GPC System Definition and Performance

P. C. CHRISTOPHER, *Central Research Laboratories, Standard T
Chemical Company, Subsidiary of Marcor Corporation, Chicago Heights,
Illinois 60411*

(article in *J. Appl. Polym. Sci.*, **20**, 2989, 1976)

Inadvertently, copy was transposed from the beginning of p. 2990 to the third and fourth lines from the bottom of that page. Please note the following.

The last sentence beginning on p. 2889 should read:

A correction for the instrumental spreading function is therefore necessary before the corrected chromatogram can be converted to molecular weight distribution and averages by the use of proper calibration curve(s).

The third sentence of the final paragraph on p. 2990 should read:

Proper GPC system definition and performance evaluation is missing from GPC studies reported to date; the reason is evidently due to the unavailability of the proper method for carrying out such an evaluation.
