The following article from the *Journal of Applied Polymer Science*, "Synthesis and characterization of the core -shell magnetic molecularly imprinted polymer nanoparticles using 2-(methacrylamido)ethyl methacrylate amide as a novel cross-link agent for controlled release of betamethasone," by Saman Azodi-Deilami, Majid Abdouss, and Davood Kordestani, published online on 4 February 2014 in Wiley Online Library (wileyonlinelibrary.com), has been retracted by agreement between the authors, the journal's editors, and Wiley Periodicals, Inc. The retraction has been agreed because of significant, unacknowledged overlap with the author's previously published work (<http://dx.doi.org/10.1007/s10856-013-5118-8>). In addition, the crosslinker the authors call novel was first reported by a separate group of authors (<http://dx.doi.org/10.1021/ja038961b>), albeit this was not known by the authors of the retracted article at the time of publication.
