Daniel P. Cole, Jaret C. Riddick, H. M. Iftexhar Jaim, Kenneth E. Strawhecker and Nicole E. Zander detail an experimental approach for characterizing the local mechanical behavior of acrylonitrile butadiene styrene (ABS) structures processed through fused deposition modeling. The ABS test specimens were processed in various build orientations and subject to multiscale mechanical tests and local morphology and chemical analyses in order to provide insight into the multiscale behavior of additive manufactured structures and gain understanding in the processing-structure-property relationship of these materials.
