Nurettin Sahiner and Sahin Demirci prepared interconnected porous networks embedded with polyaniline to form conductive cryogel composites. Neutral, anionic, and cationic cryogels were synthesized via an oxidative polymerization method. The inclusion of a conjugated polymer in the networks increased conductivity, with the conductivity being higher in the charged networks than in the neutral network. (DOI: 10.1002/app.44137)

Volume 133, Number 46 was mailed the week of September 5, 2016.
