

## Key word index Volume 32, 2005

- adiabatic pulses, 129  
amino acid type-selectivity, 309  
apolipoprotein E, 1  
apoptosis, 1  
atherosclerosis, 1  
automated NMR assignment, 55  
automation, 219
- backbone assignments, 219  
band-selective homonuclear decoupling, 129  
barnacle, 1  
base-type selection, 263  
biomolecular structure, 1  
BMRB, 1
- calmodulin, 163  
carbon-13 chemical shifts, 13  
cardiac troponin C, 281  
CC–TOCSY, 309  
cell-free protein synthesis, 235  
cement protein, 1  
chemical exchange, 281  
chemical exchange, 41  
chemical shifts, protein secondary structure, statistical energy model, statistical decision, 71  
cholesterol transport, 1  
complex, 209  
conformational change, 41  
conformational exchange, 163  
COSY, 243  
CPMG, 41  
CRIPT, 61  
cross-correlated relaxation, 113  
cross-correlation, 23  
cUUCGg tetraloop motif, 295  
<sup>13</sup>C relaxation, 295
- database, 1  
deuteration, 281  
DHPR-RyR interaction, 89  
diffusion anisotropy, 295  
digital resolution, 141  
DNA polymerase III, 235
- EF-hand, 163  
enhancer of rudimentary, 329  
eukaryotic protein, 31  
excitation-contraction coupling, 89
- FACT, 83  
Fourier transformation, 141
- G-protein, 31  
GroEL, 23
- hCdc5, 309  
HCN, 263  
heteronuclear cross-polarization, 129  
high-resolution, 31  
HMG, 83  
hydrogen exchange, 195
- IRE RNA, 179
- Karplus relationship, 273
- Lagrange interpolation, 141  
LDL receptor, 1  
linear analysis of chemical shifts (LACS), 13
- macromolecular NMR, 23  
magic angle spinning, 195  
magnetisation recovery, 113  
maximum entropy reconstruction, 55  
micro-crystalline, 195  
mobility of membrane  $\beta$ -barrels, 101  
model-free analysis, 295  
molecular dynamics simulation, 151  
molecular dynamics, 179  
mosaic spread, 101  
multiple-relay, 309
- NMR assignment, 1  
NMR structure and dynamics, 179  
NMR structure, 329  
NMR structure, 83  
NMR, 151

- NMR, 209
- NMR, 263
- NMR, 41
- NMR, 89
- non-linear sampling, 141
- non-uniform sampling, 55
- nuclear magnetic resonance, 1
- nucleic acid dynamics, 295
- <sup>15</sup>N-HSQC, 235
  
- off-resonance spin lock, 281
- oligomerization, protein–protein interactions, viral assembly, 91
- optimal control, 23
- order parameter, 151
- orthogonal spin state separation, 113
  
- paramagnetic relaxation enhancement, 61
- particle interaction model, 219
- PDB, 1
- peptide, 209
- PISEMA, 101
- preirradiation, 243
- protein backbone geometry, 13
- protein folding, 235
- protein sequence specific assignments, 309
- protein structure, 273
- protein–protein interaction, 235
- protein, 195
- protein dynamics, 273
- proton chemical shifts, 13
- proton relaxation, 281
- pyrimidine biosynthesis, 329
  
- queued spectroscopy, 113
  
- R<sup>2</sup>, 41
- radiation damping, 243
- RcsC-PR, 309
- RED analysis, 179
- reduced-dimensionality, 55
  
- RefDB, 13
- relaxation dispersion, 281
- relaxation, 23
- resonance assignment, 263
- restraints, 1
- RNA NMR assignment strategy, 129
- RNA, 263
- rotamer populations, 151
- rotating-frame relaxation, 163
  
- S<sup>2</sup>axis, 151
- scalar coupling, 129
- scalar couplings, 273
- sensitivity, 61
- side-chain assignment, 55
- sidechain assignments, 219
- side-chain dynamics, 151
- signal/noise ratio, 141
- skeletal muscle, 89
- SOD1, 209
- solid-state NMR, 195
- spectral editing, 263
- spin diffusion, 61
- spin-lock, 163
- stable-isotope labeling, 31
- subtilisin, 31
- μs-ms protein dynamics, 281
  
- TALOS, 13
- time averaging, 101
- transducin, 31
- TROSY, 113
- TROSY, 61
  
- underwater adhesive protein, 1
  
- water suppression, 243
- water suppression, 61
- water, 195
- WET, 243
