## ERRATUM

Volume **153**, Number 2 (1995), in the article "Comparison of Catalyzed and Homogeneous Reactions of Hydrocarbons for Selective Catalytic Reduction (SCR) of  $NO_x$ ," by Dmitri B. Lukyanov, Gustave Sill, Julie L. d'Itri, and W. Keith Hall, pages 265–274: On page 266, in Fig. 1, the equilibrium curve (dashed line) was misplaced. For the reader's convenience, the correct plot is shown below. The data show that equilibrium is being approached as the temperature is increased, but not as fast as previously supposed.

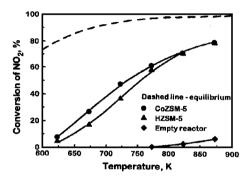

Fig. 1. Catalytic decomposition of  $NO_2$  at various temperatures vs the uncatalyzed reaction. 0.21%  $NO_2$  in He flow of 75 ml/min. Catalyst weights were 50 mg each.
