Mesenchymal Stem Cell Trials for Pulmonary Diseases 1023

Mariana A. Antunes, John G. Laffey, Paolo Pelosi, and Patricia R.M. Rocco

ACCEPTED MANUSCRIPT ONLINE 11 FEBRUARY 2014

The mini-review by Antunes et al. provides a summary of ongoing clinical trials using mesenchymal stem/stromal cells (MSCs) in lung diseases. The authors examine data supporting the use of MSCs, discuss their therapeutic potential for several lung diseases and provide a thoughtful ending concerning “open-ended” questions that remain to be addressed.
