

Table II. Apparent Stoichiometric Combinations of Sodium Chloride with Disodium Octaborate in Boron Oxide Phase of NaCl-B₂O₃-NaBO₂ System at 810° and 980° C.

Reference Points, Figure 3	NaCl Na ₂ O·4B ₂ O ₃	Remarks
B ₂ O ₃ corner up to A	1:2	Mixtures of one combination of NaCl with Na ₂ O·4B ₂ O ₃ and uncombined B ₂ O ₃ . (At 830° C., viscosity of melts decreases ^a)
A to B	1:2 and 2:3	Mixtures of two combinations of NaCl with Na ₂ O·4B ₂ O ₃ and uncombined B ₂ O ₃ . (At 830° C., viscosity of melts increases ^a)
B	2:3	Uncombined B ₂ O ₃ absent. (At 830° C., viscosity past point B decreases ^a)

^aViscosity observations by M.H. Rowell (of this laboratory).

chloride (indicated by asterisks) and estimates of the plait point compositions of the mixtures. The respective data, incorporated in the table, indicate that the solubility of B₂O₃ in sodium chloride diminishes with increasing temperature; therefore, it is exothermic. On the other hand, the compositions of the systems at the plait points do not differ appreciably at the two temperatures used.

The log-log regression lines of the molar distribution of NaBO₂ between the major components of the conjugate phases (Figure 4) show that more NaBO₂ is available for extraction by the sodium chloride phase at 980° C. than at 810° C. This may suggest that the stabilities of disodium octaborate and disodium tetraborate, regarded as present in the systems (3), are temperature-dependent according to the equations:

and

where T_1 refers to the lower and T_2 to the higher temperature.

Stoichiometric Relationships. The phase diagrams suggest that, in the composition range between the B₂O₃ corner and point B, two types of stoichiometric combination between NaCl and Na₂O·4B₂O₃ in the boron oxide phase may be

CORRECTION

In the article "Equilibria in the Hydration of Propylene and of Butylenes" by C. S. Cope [J. CHEM. ENG. DATA 11, 379 (1966)], the following corrections should be made:

Page 380, column 2, line 12: "of olefin" should read "of olefin and ether"

Page 380, Figure 1: "Ethylene Hydration (1)" should read "Ethylene Hydration (6)"

Page 381, Reaction 3: "CH₃CH₂=CH₂" should read "CH₃CH₂CH=CH₂"

Page 381, Table V, footnote i: "summed" should read "assumed".

formed. These stoichiometric combinations are indicated in Table II.

Empirical Equations. Neglecting the deformity at the NaCl corner at 810° C., the phase diagrams can be constructed by using the following three quantitative expressions

$$K_1 = \frac{[\text{NaCl}]}{[\text{NaBO}_2]} \cdot [\text{B}_2\text{O}_3]^{1/2} = 2.519 \text{ (mole \%)}^{1/2} \text{ at } 810^\circ \text{ C., and} \\ = 2.462 \text{ (mole \%)}^{1/2} \text{ at } 980^\circ \text{ C.}$$

for the segments of the immiscibility curve from the B₂O₃ corner to the point of the 2NaBO₂:3B₂O₃ ratio,

$$K_2 = \frac{[\text{NaCl}]}{[\text{NaBO}_2]^{1/2}} \cdot [\text{B}_2\text{O}_3] = 1.0580 \times 10^2 \text{ (mole \%)}^{3/2} \text{ at } 810^\circ \text{ C., and} \\ = 1.0819 \times 10^2 \text{ (mole \%)}^{3/2} \text{ at } 980^\circ \text{ C.}$$

for the following segments to the vicinity of the respective plait points, and

$$K_3 = \frac{[\text{NaCl}]^{1/2}}{[\text{NaBO}_2]^2} \cdot [\text{B}_2\text{O}_3] = 7.625 \times 10^{-2} \text{ (mole \%)}^{-1/2} \text{ at } 810^\circ \text{ C., and} \\ = 7.572 \times 10^{-2} \text{ (mole \%)}^{-1/2} \text{ at } 980^\circ \text{ C.}$$

from the respective plait points to the NaCl corners. The curves in Figure 3 were drawn according to the above relationships.

ACKNOWLEDGMENT

The illustrations were drawn by Ichiro Hayashi.

CORRECTION

In the article "Equations of State for Propyne" by T. M. Stark and Joseph Joffe [J. CHEM. ENG. DATA 9, 327 (1964)], the equation at the bottom of page 328 should be corrected to read:

$$\frac{P}{2.0482} = \frac{T}{V} + \frac{1.734T - 1554 - 1.949 \times 10^6/T^2}{V^2} + \frac{9.241T - 5294}{V^3} + \\ \frac{22,533}{V^6} + \frac{8.342 \times 10^6 (1 + 7.759/V^2)e^{-7.759/V^2}}{V^3 T^2}$$

In the nomenclature on page 329, the units for the gas constant, R , should be changed from cc. atm./mole ° K. to cc. atm./gram ° K.
