The reaction of diethylaminosulfur trifluoride with a tertiary cyclobutanol afforded a fluorocyclobutane, a (fluoromethyl) cyclopropane or a homoallylic fluoride.

There has been much effort to develop novel methods of fluorination, because fluorine-containing molecules have become increasingly important in scientific and industrial $fields¹$ Diethylaminosulfur trifluoride (DAST), an agent converting aliphatic alcohols or silyl ethers into alkyl fluorides under mild conditions, is one of the most convenient reagents in organic synthesis.² There have been several reports concerning new fluorinating methods using $DAST.^{3-15}$ Among these methods, we reported that the reaction of DAST with tertiary cyclopropyl silyl ethers causes ring opening to give allylic fluorides. $¹$ </sup>

Scheme 1 Reagents and conditions: i, DAST, CH_2Cl_2 , room temperature

We now report that a tertiary cyclobutanol reacts with DAST to afford a fluorocyclobutane, a (fluoromethyl)cyclopropane or a homoallylic fluoride, Scheme 1. The results of this reaction are summarized in Table 1. Fluorocyclobutanes 2 were obtained from the substrates 1a, 1b bearing electron-donating substituents at C-1 $(R^1 = n - C_9H_{19})$ or Ph). (Fluoromethyl)cyclopropanes 3 resulted with the electron-withdrawing group at C-1 $(R^1 = CN)$ or $CO₂Me$)

^{*}To receive any correspondence.

*An inseparable mixture. The ratio of the products was determined on the basis of the ¹ H and 19F NMR spectral data.

 $(1c-1e)$. The compound 1f bearing both an electronwithdrawing group at C-1 and electron-donating substituents at C-3 $(R^1 = CN, R^3 = Ph)$ gave a homoallylic fluoride 4 as the main product.

A plausible reaction mechanism is depicted in Scheme 2. The first step is nucleophilic displacement of a fluorine atom in DAST by the oxygen of the substrate 1. Next, the elimination of sulfinyl dimethylamide fluoride generates a carbocation triad (equilibrium mixture of A , B and C).¹⁶ In the cases of compounds bearing electron-donating substituents at C-1, cyclobutyl cations (A) were predominant. On the other hand, cyclopropylmethyl cations (B) predominated in the cases of compounds bearing an electronwithdrawing group at $C-1$. The homoallylic cation (C) predominated only in the case of the compound having an electron-withdrawing group at C-1 and electron-donating substituents at C-3. Finally, the fluoride ion attacks the carbocations to afford the final products.

Experimental

Infrared spectra were measured with a Perkin-Elmer 1600 series
FT-IR spectrophotometer, ¹H and ¹⁹F NMR spectra on a JEOL $GX270$ instrument with tetramethylsilane (for ${}^{1}H$) and chlorotrifluoromethane (for ^{19}F) as an internal standard, mass (MS) and high-resolution mass spectra (HRMS) on a JEOL JMS D-200 spectrometer.

J. Chem. Research (S), 1998, 652-653†

[†]This is a Short Paper as defined in the Instructions for Authors, Section 5.0 [see *J. Chem. Research* (S) , 1998, Issue 1]; there is therefore no corresponding material in J . Chem. Research (M) .

General Procedure for the Reaction of DAST with Tertiary Cyclobutanols.—To a solution of tertiary cyclobutanol (1.0 mmol) in dichloromethane (3 ml) was added DAST (1.0 mmol) at room temperature under an inert atmosphere, and the mixture was stirred for 30 min. A saturated sodium hydrogencarbonate solution was added, and the resulting mixture extracted with dichloromethane. The extract was dried over anhydrous sodium sulfate, filtered, and evaporated to afford the crude product. Purification by chromatography (silica gel, hexane-dichloromethane) gave a pure sample.

1-Fluoro-1-nonylcyclobutane $2a$. Colorless oil; δ_H (CDCl₃) 0.88 $(3 H, t, J 7.0 Hz)$, 1.22-1.35 (12 H, m), 1.35-1.41 (2 H, m), 1.41-1.50 (1 H, m), $1.61-1.72$ (2 H, m), $1.75-1.84$ (1 H, m), 2.02–2.15 (2 H, m), 2.20–2.34 (2 H, m), δ_F (CDCl₃) –130.8 to ÿ131.1 (m); IR 2882, 1556, 1538, 1504, 1392, 1336, 1200, 1116, 1057, 980, 803, 707, 666 cm⁻¹; MS m/z 199 ($[M - H]$ ⁺), 180 $([M - H_F]^+);$ HRMS Calc. for C₁₃H₂₄F $([M - H]^+)$ 199.1993, Found 199.1929.

1-Fluoro-1-phenylcyclobutane 2b.—Colorless oil; δ_H (CDCl₃) 1.16-1.19 (1 H, m), 1.69-1.80 (1 H, m), 2.02-2.17 (1 H, m), 2.52-2.74 (3 H, m), 7.30-7.35 (1 H, m), 7.37-7.42 (2 H, m), 7.46-7.50 (2 H, m); δ_F (CDCl₃) -126.8 to -127.1 (m); IR 3047, $3018, 2970, 1567, 1556, 1538, 1484, 1360, 1270, 1200, 1093, 1036, 972, 926, 902, 834, 794, 723, 677, 660 \text{ cm}^{-1}; \text{MS } m/z$ 149 ($[M - H]$ ⁺); HRMS Calc. for $C_{10}H_{10}F([M - H]^{+})$ 149.0887, Found 149.0845.

Inseparable mixture of $1-(\text{fluorometry})$ cyclopropanecarbonitrile 3c and 2-(2-fluoroethyl)prop-2-enenitrile $4c$. Colorless oil; δ_H (CDCl₃) 1.08-1.11 (16/9 H, m), 1.39-1.42 (16/9 H, m), 2.50 (2/9 H, dt, J_{HF} 25.0, J_{HH} 6.0), 4.34 (16/9 H, d, J_{HF} 47.0), 4.62 (2/9 H, dt, J_{HF} 47.0, J_{HH} 6.0 Hz), 5.88 (1/9 H, s), 6.01 (1/9 H, s); δ_F (CDCl₃) -212.09 $(8/9 \text{ F}, \text{ t}, J 47.0), -220.15 \ (1/9 \text{ F}, \text{ tt}, J 47.0 \text{ and } 25.0 \text{ Hz}); \text{ IR } 2970,$ $\frac{2248}{1654}$, 1617, 1435, 1387, 1289, 1041, 1010 cm⁻¹; MS m/z 100 $([M + H]^{+});$ 79 $([M - HF]^{+}).$

Methyl 1- $(huoromethyl)cyclopropancearboxylate$ 3d. - Colorless oil; δ_H (CDCl₃) 0.99-1.00 (2 H, m), 1.37-1.38 (2 H, m), 3.73 (3 H, s), 4.52 (2 H, d, J_{HF} 49.0 Hz); δ_F (CDCl₃) -213.10 (t, J 49.0 Hz); IR 2956, 1732, 1438, 1356, 1283, 1248, 1200, 1167, 1003, 755 cm⁻ ; MS m/z 133 ($[M + H]$ ⁺), 132 (M⁺), 113 ($[M - F]$ ⁺); HRMS Calc. for $C_6H_9O_2F (M^+)$ 132.0586, Found 132.0584.

1-(Fluorodiphenylmethyl)cyclopropanecarbonitrile $3e$. Colorless oil; δ_H (CDCl₃) 1.25–1.30 (2 H, m), 1.42–1.46 (2 H, m), 7.19–7.45 $(10 \text{ H}, \text{m})$; δ_{F} (CDCl₃) -142.90 (s); IR 2926, 2240, 1780, 1654, 1600, 1493, 1449, 1277, 1191, 1078, 1049, 1011, 752, 700 cm⁻¹; MS m/z 251 (M⁺); HRMS Calc. for C₁₇H₁₄FN (M⁺) 251.1092, Found 251.1116.

1-Fluoro-3,3-diphenylcyclobutanecarbonitrile $2f$ -Colorless oil: δ_H (CDCl₃) 3.34-3.43 (2 H, m), 3.61-3.68 (2 H, m), 7.16-7.37 (10 H, m); δ_F (CDCl₃) -143.91 to 144.17 (m); IR 3854, 3752, 3736, 3712, 3676, 3650, 3630, 3023, 2362, 1719, 1654, 1597, 1491, 1447, 1415, 1236, 1120, 1075, 1025, 928, 756, 701 cm⁻¹; MS m/z 251 (M⁺); HRMS Calc. for $C_{17}H_{14}FN$ (M⁺) 251.1092, Found 251.1085.

2-(2-Fluoro-2,2-diphenylethyl)prop-2-enenitrile $4f$ -Colorless crystals; mp 101–102 °C; $\delta_{\rm H}$ (CDCl₃) 3.32 (2 H, d, $J_{\rm HF}$ 23.0), 5.69 (1 H, s), 5.94 (1 H, s), 7.30–7.40 (10 H, m); δ_F (CDCl₃) –148.74 (t, δ_{F} J 23.0 Hz); IR 3104, 3053, 2231, 1913, 1600, 1497, 1451, 1326, 1250, 1211, 1057, 1038, 1015, 982, 958, 910, 871, 770, 774, 704, 668 cm⁻¹; MS m/z 251 (M⁺); HRMS Calc. for C₁₇H₁₄FN (M⁺) 251.1092, Found 251.1187.
