PREPARATIVE LIQUID CHROMATOGRAPH

Waters Assoc. announce their new PrepLCTM/System 500 which affords preparative-scale separations on a routine basis. System 500 employs radially compressed columns: PrepPAKTM cartridges (5.7 cm x 30 cm) are loaded into the compression chamber and, within 90 sec, are radially compressed into large-diameter preparative columns. Purity and quantity of the products can be increased by using several PrepLC columns in series, or by the Recycle capability.

LECTINS FROM I.B.F.

L'Industrie Biologique Française has made available a new range of lectins in addition to its already existing products, Con-A and WGA. The new range includes PNA, PWM, PHA-ELs and PHA-Ls. A descriptive brochure is available including the main application fields of the lectins, technical specifications of the manufactured products and a bibliography.
