The Publisher regrets that on page 244 Figure 2 has been replaced by Figure 5. The correct figure and its caption should be:

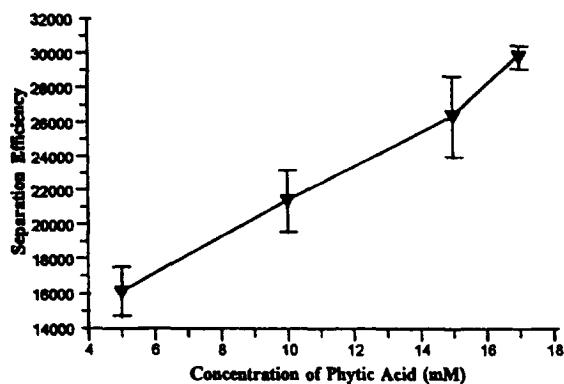

Fig. 2. Effect of phytic acid concentration on SP separation efficiency. The BGE was 150 mM boric acid, pH 7. The data for 0 mM phytic acid were not included in the plot since the separation efficiency was essentially 0 and no apparent peak was visible. The total column length was 73 cm with a length to the detector of 46 cm, the applied voltage was +20 kV. The concentration of SP injected was 150 μ M. Note that each point represents an averaged data point where $n=3$. UV detection was accomplished at 210 nm.
