## Subject Index Vol. 908

### Adsorption

Performance comparison of suspended bed and batch contactor chromatography 908(2001)169

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

Flow microcalorimetric measurements for bovine serum albumin on reversed-phase and anion-exchange supports under overloaded conditions 908(2001)293

### Adipoyl-7-amino-3-deacetoxycephalosporanic acid

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

### Adsorption isotherms

Description of adsorption equilibria in liquid chromatography systems with binary mobile phases 908(2001)3

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

Application of equilibrium theory to ternary moving bed configurations (four+four, five+four, eight and nine zones). I. Linear case 908(2001)71

Application of the equilibrium theory to ternary moving bed configurations (4+4, 5+4, 8 and 9 zones). II. Langmuir case 908(2001)87

Theoretical study of the accuracy of the elution by characteristic points method for bi-Langmuir isotherms 908(2001)111

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

### Affinity chromatography

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

### Albumin

Flow microcalorimetric measurements for bovine serum albumin on reversed-phase and anion-exchange supports under overloaded conditions 908(2001)293

### Antibiotics

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

### Anion exchangers

Comparison of chromatographic ion-exchange resins. II. More strong anion-exchange resins 908(2001)149

### Automation

Automated normal-phase preparative high-performance liquid chromatography as a substitute for flash chromatography in the synthetic research laboratory 908(2001)143

### Axial dispersion

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

### Batch contractor chromatography

Performance comparison of suspended bed and batch contactor chromatography 908(2001)169

### Benzophenone

Description of adsorption equilibria in liquid chromatography systems with binary mobile phases 908(2001)3

### Breakthrough curves

Control method for integrity of continuous beds 908(2001)179

### Calorimetry

Flow microcalorimetric measurements for bovine serum albumin on reversed-phase and anion-exchange supports under overloaded conditions 908(2001)293

### Cellulose

Direct isolation of monoclonal antibodies from tissue culture supernatant using the cation-exchange cellulose Express-Ion S 908(2001)223

**Cephalosporins**

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

**Chiral stationary phases, LC**

Modification of a commercial chiral stationary phase. Influences on enantiomer separations using simulated moving bed chromatography 908(2001)185

**Cholesterol**

Description of adsorption equilibria in liquid chromatography systems with binary mobile phases 908(2001)3

**Column performance**

Characterizing the performance of industrial-scale columns 908(2001)131

**Continuous beds**

Control method for integrity of continuous beds 908(2001)179

**Crystallization**

Coupling of simulated moving bed chromatography and fractional crystallisation for efficient enantioseparation 908(2001)201

**Dynamic adsorption**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

**Elution by characteristic point method**

Theoretical study of the accuracy of the elution by characteristic points method for bi-Langmuir isotherms 908(2001)111

**Enantiomer separation**

Modification of a commercial chiral stationary phase. Influences on enantiomer separations using simulated moving bed chromatography 908(2001)185

Coupling of simulated moving bed chromatography and fractional crystallisation for efficient enantioseparation 908(2001)201

**Equilibrium theory**

Application of equilibrium theory to ternary moving bed configurations (four+four, five+four, eight and nine zones). I. Linear case 908(2001)71

Application of the equilibrium theory to ternary moving bed configurations (4+4, 5+4, 8 and 9 zones). II. Langmuir case 908(2001)87

**Frontal analysis**

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

**Galactosidase**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

**Gradient elution**

Advances in process chromatography gradient elution using binary linear gradients 908(2001)163

**Green-fluorescent protein**

Continuous separation of green fluorescent protein by annular chromatography 908(2001)243

**Heat of adsorption**

Flow microcalorimetric measurements for bovine serum albumin on reversed-phase and anion-exchange supports under overloaded conditions 908(2001)293

**Hydrophobic charge induction chromatography**

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

**Hydrophobic interaction chromatography**

Use of ion-exchange chromatography and hydrophobic interaction chromatography in the preparation and recovery of polyethylene glycol-linked proteins 908(2001)235

**Hydrophobicity**

Calculation of partition coefficient and hydrophobic moment of the secondary structure of lysozyme 908(2001)215

**Ideal adsorbed solution theory**

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

**Immunoglobulins**

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

**Induced competition model**

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

**IsoPak columns**

Characterizing the performance of industrial-scale columns 908(2001)131

**Low solvent consumption point**

Application of equilibrium theory to ternary moving bed configurations (four+four, five+four, eight and nine zones). I. Linear case 908(2001)71

**Lysozyme**

Control method for integrity of continuous beds 908(2001)179

Calculation of partition coefficient and hydrophobic moment of the secondary structure of lysozyme 908(2001)215

#### **Mandelic acid**

Coupling of simulated moving bed chromatography and fractional crystallisation for efficient enantioseparation 908(2001)201

#### **Mass transfer**

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

#### **Mathematical modeling**

Purification of adipoyl-7-amino-3-deacetoxycephalosporanic acid from fermentation broth using stepwise elution with a synergistically adsorbed modulator 908(2001)273

#### **Mercaptoethylpyridine**

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

#### **Mobile phase composition**

Description of adsorption equilibria in liquid chromatography systems with binary mobile phases 908(2001)3

#### **Monoclonal antibodies**

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

#### **Monoclonal antibody**

Direct isolation of monoclonal antibodies from tissue culture supernatant using the cation-exchange cellulose Express-Ion S 908(2001)223

#### **Monolithic columns**

Control method for integrity of continuous beds 908(2001)179

#### **Mucin**

Direct isolation of monoclonal antibodies from tissue culture supernatant using the cation-exchange cellulose Express-Ion S 908(2001)223

#### **Network model**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

#### **Organic acids**

Coupling of simulated moving bed chromatography and fractional crystallisation for efficient enantioseparation 908(2001)201

#### **Ovalbumin**

Performance comparison of suspended bed and batch contactor chromatography 908(2001)169

#### **Partition coefficients**

Calculation of partition coefficient and hydrophobic moment of the secondary structure of lysozyme 908(2001)215

#### **Phenols**

Description of adsorption equilibria in liquid chromatography systems with binary mobile phases 908(2001)3

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

#### **Phenylethanol**

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

#### **Phenylpropanol**

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

#### **Poly(ethylene glycol) bis-vinylsulfone**

Use of ion-exchange chromatography and hydrophobic interaction chromatography in the preparation and recovery of polyethylene glycol-linked proteins 908(2001)235

#### **Poly(ethylene glycol)**

Use of ion-exchange chromatography and hydrophobic interaction chromatography in the preparation and recovery of polyethylene glycol-linked proteins 908(2001)235

#### **Pore connectivity**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

#### **Pore diffusion**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

#### **Pore size distribution**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

#### **Pore structure**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

#### **Porosity**

Effect of the homogeneity of the column set on the performance of a simulated moving bed unit. I. Theory 908(2001)49

**Preparative chromatography**

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

Characterizing the performance of industrial-scale columns 908(2001)131

Automated normal-phase preparative high-performance liquid chromatography as a substitute for flash chromatography in the synthetic research laboratory 908(2001)143

Comparison of chromatographic ion-exchange resins. II. More strong anion-exchange resins 908(2001)149

Advances in process chromatography gradient elution using binary linear gradients 908(2001)163

Performance comparison of suspended bed and batch contactor chromatography 908(2001)169

Modification of a commercial chiral stationary phase. Influences on enantiomer separations using simulated moving bed chromatography 908(2001)185

Use of ion-exchange chromatography and hydrophobic interaction chromatography in the preparation and recovery of polyethylene glycol-linked proteins 908(2001)235

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

Separation of steroid compounds by overloaded preparative chromatography with precipitation in the fluid phase 908(2001)265

**Protein A**

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

**Proteins**

Pore network modelling: determination of the dynamic profiles of the pore diffusivity and its effect on column performance as the loading of the solute in the adsorbed phase varies with time 908(2001)35

Comparison of chromatographic ion-exchange resins. II. More strong anion-exchange resins 908(2001)149

Performance comparison of suspended bed and batch contactor chromatography 908(2001)169

Control method for integrity of continuous beds 908(2001)179

Calculation of partition coefficient and hydrophobic moment of the secondary structure of lysozyme 908(2001)215

Use of ion-exchange chromatography and hydrophobic interaction chromatography in the preparation and recovery of polyethylene glycol-linked proteins 908(2001)235

Comparison of hydrophobic charge induction chromatography with affinity chromatography on protein A for harvest and purification of antibodies 908(2001)251

Flow microcalorimetric measurements for bovine serum albumin on reversed-phase and anion-exchange supports under overloaded conditions 908(2001)293

**Real adsorbed solution theory**

Frontal analysis method to determine competitive adsorption isotherms 908(2001)19

**Retention factors**

Effect of the homogeneity of the column set on the performance of a simulated moving bed unit. I. Theory 908(2001)49

**Simulated moving bed chromatography**

Effect of the homogeneity of the column set on the performance of a simulated moving bed unit. I. Theory 908(2001)49

Application of equilibrium theory to ternary moving bed configurations (four+four, five+four, eight and nine zones). I. Linear case 908(2001)71

Application of the equilibrium theory to ternary moving bed configurations (4+4, 5+4, 8 and 9 zones). II. Langmuir case 908(2001)87

Modification of a commercial chiral stationary phase. Influences on enantiomer separations using simulated moving bed chromatography 908(2001)185

Coupling of simulated moving bed chromatography and fractional crystallisation for efficient enantioseparation 908(2001)201

**Solvation parameter model**

Calculation of partition coefficient and hydrophobic moment of the secondary structure of lysozyme 908(2001)215

**Stationary phases, LC**

Characterizing the performance of industrial-scale columns 908(2001)131

Comparison of chromatographic ion-exchange resins. II. More strong anion-exchange resins 908(2001)149

Control method for integrity of continuous beds 908(2001)179

#### **Steroids**

Separation of steroid compounds by overloaded preparative chromatography with precipitation in the fluid phase 908(2001)265

#### **Suspended bed chromatography**

Performance comparison of suspended bed and batch contactor chromatography 908(2001)169

#### **Ternary moving bed**

Application of the equilibrium theory to ternary moving bed configurations (4+4, 5+4, 8 and 9 zones). II. Langmuir case 908(2001)87

#### **Ternary moving bed configurations**

Application of equilibrium theory to ternary moving bed configurations (four+four, five+four, eight and nine zones). I. Linear case 908(2001)71

#### **Thermodynamic parameters**

Calculation of partition coefficient and hydrophobic moment of the secondary structure of lysozyme 908(2001)215

Flow microcalorimetric measurements for bovine serum albumin on reversed-phase and anion-exchange supports under overloaded conditions 908(2001)293

#### **Tröger's base**

Modification of a commercial chiral stationary phase. Influences on enantiomer separations using simulated moving bed chromatography 908(2001)185

#### **True moving bed**

Application of the equilibrium theory to ternary moving bed configurations (4+4, 5+4, 8 and 9 zones). II. Langmuir case 908(2001)87
