

Subject Index Vol. 1060

Acidity

Characterization of the acidity of residual silanol groups in microparticulate and monolithic reversed-phase columns 1060(2004)135

Alkylphenones

Stationary-phase effects on efficiency in micellar liquid chromatography 1060(2004)195

Band broadening

Band broadening in size-exclusion chromatography of polydisperse samples 1060(2004)217

Benzenes

Development of fluorinated low temperature glassy carbon films for solid-phase microextraction 1060(2004)215

Bonded phases

Development of an accelerated low-pH reversed-phase liquid chromatography column stability test 1060(2004)153

Cationic dye

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

Chemical and thermal stability

Review on the chemical and thermal stability of stationary phases for reversed-phase liquid chromatography (Review) 1060(2004)23

Chiral recognition mechanisms

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Chiral stationary phases, LC

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Column efficiency

Rationalisation of unusual changes in efficiency and retention with temperature shown for bases in reversed-phase high-performance liquid chromatography at intermediate pH 1060(2004)117

Monitoring effective column temperature by using shape selectivity and hydrophobicity and the effects of mobile phase temperature 1060(2004)147

Column longevity

Review on the chemical and thermal stability of stationary phases for reversed-phase liquid chromatography (Review) 1060(2004)23

Column selectivity

The hydrophobic-subtraction model of reversed-phase column selectivity (Review) 1060(2004)77

Column stability

Development of an accelerated low-pH reversed-phase liquid chromatography column stability test 1060(2004)153

Desorption

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

Diffusion coefficients

Stationary-phase effects on efficiency in micellar liquid chromatography 1060(2004)195

Dimethyl-chloromethyl-phenylethylchlorosilane

Synthesis and characterization of hypercrosslinked, surface-confined, ultra-stable silica-based stationary phases 1060(2004)61

DNA

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Efficiency

Stationary-phase effects on efficiency in micellar liquid chromatography 1060(2004)195

Enantiomer separation

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Enthalpy–entropy compensation

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Fluorinated glassy carbon

Development of fluorinated low temperature glassy carbon films for solid-phase microextraction 1060(2004)215

Glassy carbon films

Development of fluorinated low temperature glassy carbon films for solid-phase microextraction 1060(2004)215

High performance liquid chromatography

Development of some stationary phases for reversed-phase high performance liquid chromatography 1060(2004)9

Hydrophobicity

Monitoring effective column temperature by using shape selectivity and hydrophobicity and the effects of mobile phase temperature 1060(2004)147

Hydrophobic-subtraction model

The hydrophobic-subtraction model of reversed-phase column selectivity (Review) 1060(2004)77

Instrumentation, LC

Scientific achievements of Jack Kirkland to the development of HPLC and in particular to HPLC silica packings—a personal perspective (Review) 1060(2004)1

Kirkland

Scientific achievements of Jack Kirkland to the development of HPLC and in particular to HPLC silica packings—a personal perspective (Review) 1060(2004)1

Macrocyclic glycopeptide

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Mathematical modeling

pH gradient high-performance liquid chromatography: theory and applications 1060(2004)165

Metal ions

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Metathesis polymerization

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Method transferability

Monitoring effective column temperature by using shape selectivity and hydrophobicity and the effects of mobile phase temperature 1060(2004)147

Micellar liquid chromatography

Stationary-phase effects on efficiency in micellar liquid chromatography 1060(2004)195

Mobile phase composition

Effect of solvent strength and temperature on retention for a polar-end-capped, octadecylsiloxane-bonded silica stationary phase with methanol-water mobile phases 1060(2004)177

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Monolithic columns

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Characterization of the acidity of residual silanol groups in microparticulate and monolithic reversed-phase columns 1060(2004)135

Nanoparticles

Development and evaluation of gold-centered monolayer protected nanoparticle stationary phases for gas chromatography 1060(2004)225

pK_a

Characterization of the acidity of residual silanol groups in microparticulate and monolithic reversed-phase columns 1060(2004)135

Peak tailing

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

pH

Rationalisation of unusual changes in efficiency and retention with temperature shown for bases in reversed-phase high-performance liquid chromatography at intermediate pH 1060(2004)117

pH effects

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

pH gradient

pH gradient high-performance liquid chromatography: theory and applications 1060(2004)165

Polydispersity

Band broadening in size-exclusion chromatography of polydisperse samples 1060(2004)237

Proteins

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Retention behaviour

Rationalisation of unusual changes in efficiency and retention with temperature shown for bases in reversed-phase high-performance liquid chromatography at intermediate pH 1060(2004)117

Investigation of retention on bare silica using reversed-phase mobile phases at elevated temperatures 1060(2004)187

Retention models

The hydrophobic-subtraction model of reversed-phase column selectivity (Review) 1060(2004)77

Reversed-phase materials

Development of an accelerated low-pH reversed-phase liquid chromatography column stability test 1060(2004)153

Reversed-phase stationary phases

Review on the chemical and thermal stability of stationary phases for reversed-phase liquid chromatography (Review) 1060(2004)23

Reviews

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

The hydrophobic-subtraction model of reversed-phase column selectivity (Review) 1060(2004)77

Ristocetin A

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Selectivity

Development and evaluation of gold-centered monolayer protected nanoparticle stationary phases for gas chromatography 1060(2004)225

Self-assembled monolayer

Synthesis and characterization of hypercrosslinked, surface-confined, ultra-stable silica-based stationary phases 1060(2004)61

Shape selectivity

Monitoring effective column temperature by using shape selectivity and hydrophobicity and the effects of mobile phase temperature 1060(2004)147

Silanol activity

Characterization of the acidity of residual silanol groups in microparticulate and monolithic reversed-phase columns 1060(2004)135

Silanols

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

Silica

Investigation of retention on bare silica using reversed-phase mobile phases at elevated temperatures 1060(2004)187

Silica packings

Scientific achievements of Jack Kirkland to the development of HPLC and in particular to HPLC silica packings—a personal perspective (Review) 1060(2004)1

Simulation

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

Size-exclusion chromatography

Band broadening in size-exclusion chromatography of polydisperse samples 1060(2004)237

Solid-phase extraction

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Solid-phase microextraction

Development of fluorinated low temperature glassy carbon films for solid-phase microextraction 1060(2004)215

Solvation parameter model

Effect of solvent strength and temperature on retention for a polar-end-capped, octadecylsiloxane-bonded silica stationary phase with methanol-water mobile phases 1060(2004)177

Solvent strength

Effect of solvent strength and temperature on retention for a polar-end-capped, octadecylsiloxane-bonded silica stationary phase with methanol-water mobile phases 1060(2004)177

Stability test

Development of an accelerated low-pH reversed-phase liquid chromatography column stability test 1060(2004)153

Stationary phase developments

Development of some stationary phases for reversed-phase high-performance liquid chromatography 1060(2004)9

Stationary phase selectivity

Development of some stationary phases for reversed-phase high-performance liquid chromatography 1060(2004)9

Stationary phase stability

Development of some stationary phases for reversed-phase high-performance liquid chromatography 1060(2004)9

Stationary phases

Development of some stationary phases for reversed-phase high-performance liquid chromatography 1060(2004)9

Stationary phases, GC

Development and evaluation of gold-centered monolayer protected nanoparticle stationary phases for gas chromatography 1060(2004)225

Stationary phases, LC

Scientific achievements of Jack Kirkland to the development of HPLC and in particular to HPLC silica packings—a personal perspective (Review) 1060(2004)1

Metathesis polymerization-derived chromatographic supports (Review) 1060(2004)43

Synthesis and characterization of hypercrosslinked, surface-confined, ultra-stable silica-based stationary phases 1060(2004)61

Characterization of the acidity of residual silanol groups in microparticulate and monolithic reversed-phase columns 1060(2004)135

Development of an accelerated low-pH reversed-phase liquid chromatography column stability test 1060(2004)153

Effect of solvent strength and temperature on retention for a polar-end-capped, octadecylsiloxane-bonded silica stationary phase with methanol-water mobile phases 1060(2004)177

Stationary-phase effects on efficiency in micellar liquid chromatography 1060(2004)195

Substrates

Review on the chemical and thermal stability of stationary phases for reversed-phase liquid chromatography (Review) 1060(2004)23

Tailing

pH dependence of tailing in reversed-phase chromatography of a cationic dye: measurement of the strong adsorption site surface density 1060(2004)127

Teicoplanin

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Temperature

Monitoring effective column temperature by using shape selectivity and hydrophobicity and the effects of mobile phase temperature 1060(2004)147

Temperature effects

Rationalisation of unusual changes in efficiency and retention with temperature shown for bases in reversed-phase high-performance liquid chromatography at intermediate pH 1060(2004)117

Effect of solvent strength and temperature on retention for a polar-end-capped, octadecylsiloxane-bonded silica stationary phase with methanol-water mobile phases 1060(2004)177

Investigation of retention on bare silica using reversed-phase mobile phases at elevated temperatures 1060(2004)187

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Thermodynamics

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Vancomycin

Temperature and enantioseparation by macrocyclic glycopeptide chiral stationary phases 1060(2004)205

Van't Hoff plot

Investigation of retention on bare silica using reversed-phase mobile phases at elevated temperatures 1060(2004)187
