Received 22 August 2005; accepted 24 August 2005

Available online 19 September 2005

Keywords: Gas chromatography; Capillary columns; Stationary phases; GC; Ultra thick film; Large volume injection

In the Acknowledgement section of this paper [1], the authors express “their gratitude” to me for “useful discussions and valuable remarks.”

I want to state that I had no discussions with the authors with respect to the subject of the paper or the reported results, and thus, I could not make any “valuable remarks.” I learned the first time about their work only now, when reading the published text

of the paper. In fact, I question the interpretation of some of their results and disagree with a number of their conclusions.
