

Erratum

Erratum to “Behavior and characteristics of biogenic amines, ornithine and lysine derivatized with the *o*-phthalaldehyde–ethanethiol–fluorenylmethyl chloroformate reagent” [J. Chromatogr. A 1087 (2005) 210–222]

R. Hanczko^a, Á. Kőrös^a, F. Tóth^b, I. Molnár-Perl^{a,*}

^a Institute of Inorganic and Analytical Chemistry, L. Eötvös University, H-1518 Budapest 112, P.O. Box 32, Hungary

Received 26 August 2005; accepted 26 August 2005

Available online 21 September 2005

Keywords: Biogenic amines; Ornithine; Lysine; Derivatization; LC

Page 219, section 3.54:

Left-hand column:

Second text line: amino group should read α -amino group; neighbor should read linked.

Third text line: amino group should read δ -amino group; neighbor should read linked.

One but last line of paragraph marked (i): amino group should read α -amino group; neighbor should read linked.

Right-hand column:

Line marked (i) should read line marked (ii); first line: C2 and C3 should read C1–C2.

Line marked (ii) should read line marked (iii); first line: is the neighboring to should read is the α -one linked; last line: neighboring amino should read neighboring, δ -amino.

Page 220, Table 6 should read:

Table 6

Fragmentation possibilities of the simple mixed compound of ornithine: Orn5 = {[OPA][ET][FMOC][Orn]-H₂O}E = m/z = 497.5

Cleavage between ^a	Possible fragments of Orn5 = m/z = 497.5	
	α -Amino group	δ -Amino group
C1 (45) and C2 (87)	FMOC m/z = 267.2 OPA/ET m/z = 205.2	OPA/ET m/z = 247.2–H ₂ O = 229.2 FMOC m/z = 309.2
C2 (74) and C3 (58)	FMOC m/z = 296.2 OPA/ET m/z = 234.2	OPA/ET m/z = 218.2 FMOC m/z = 280.2
C3 (88) and C4 (44)	FMOC m/z = 310.2 OPA/ET m/z = 248.2	OPA/ET m/z = 204.2 FMOC m/z = 266.2
C4 (102) and C5 (30)	FMOC m/z = 324.2 OPA/ET m/z = 262.2	OPA/ET m/z = 190.2 FMOC m/z = 252.2

Indications: As in Fig. 9A–D.

^a In parentheses = initial fragment masses (m/z).

The changes do not affect the major conclusions of the paper.
