SHORT COMMUNICATIONS

Contributions intended for publication under this heading should be expressly so marked; they should not exceed about 1000 words; they should be forwarded in the usual way to the appropriate Co-editor; they will be published as speedily as possible.

Acta Cryst. (1988). **B44**, 198

The structure and absolute configuration of (+)-biperiden: a chiral ligand for the pirenzepine binding site.

Erratum. By PENELOPE W. CODDING, *Departments of Chemistry and Pharmacology and Therapeutics, University of Calgary, Calgary, Alberta T2N 1N4, Canada*

(Received 26 October 1987)

Abstract

According to the IUPAC sequence-rule preferences, the absolute configuration of (+)-biperiden at C(1) should be assigned (*R*)-configuration not the (*S*)-configuration reported

in the original manuscript [Coddling (1986). *Acta Cryst.* **B42**, 632–638].

All relevant information is given in the *Abstract*.

Acta Cryst. (1988). **B44**, 198

2,2,4,4-Tetramethyl-1,3-cyclobutanedione. Erratum. By CHARLES D. SHIRRELL and DONALD E. WILLIAMS.

Department of Chemistry, University of Louisville, Louisville, Kentucky 40208, USA

(Received 25 November 1987)

Abstract

There is a typographical error in the paper by Shirrell & Williams [*Acta Cryst.* (1974), **B30**, 245–246]. The correct

space group is *C2/m* and all calculations were performed in this space group.

All relevant information is given in the *Abstract*.
