

Continued from inside back cover

- 633 **Building resolving large-eddy simulations and comparison with wind tunnel experiments**
P.K. Smolarkiewicz, R. Sharman, J. Weil, S.G. Perry, D. Heist and G. Bowker
- 654 **A tailored solver for bifurcation analysis of ocean-climate models**
A. de Niet, F. Wubs, A.T. van Scheltinga and H.A. Dijkstra
- 680 **Shape and topology optimization of compliant mechanisms using a parameterization level set method**
Z. Luo, L. Tong, M.Y. Wang and S. Wang
- 706 **Potential-based reduced Newton algorithm for nonlinear multiphase flow in porous media**
F. Kwok and H. Tchelepi
- 728 **Multiscale modeling of alloy solidification using a database approach**
L. Tan and N. Zabaras
- 755 **Inverse scattering by a continuation method with initial guesses from a direct imaging algorithm**
G. Bao, S. Hou and P. Li
- 763 **A lattice Boltzmann method for incompressible two-phase flows on partial wetting surface with large density ratio**
Y.Y. Yan and Y.Q. Zu
- 776 **Glimm–Godunov’s method for cosmic-ray-hydrodynamics**
F. Miniati
- 797 **On the stability and performance of discrete event methods for simulating continuous systems**
J. Nutaro and B. Zeigler
- 820 **High-order numerical method for the nonlinear Helmholtz equation with material discontinuities in one space dimension**
G. Baruch, G. Fibich and S. Tsynkov
- 851 **Explicit time-domain approaches based on numerical Green’s functions computed by finite differences – The ExGA family**
W.J. Mansur, F.S. Loureiro, D. Soares Jr. and C. Dors
