

Continued from outside back cover

- 3345 **Numerical solution of the linearized Boltzmann equation for an arbitrary intermolecular potential**
F. Sharipov and G. Bertoldo
- 3358 **A velocity decomposition approach for moving interfaces in viscous fluids**
J.T. Beale and A.T. Layton
- 3368 **FORCE schemes on unstructured meshes I: Conservative hyperbolic systems**
E.F. Toro, A. Hidalgo and M. Dumbser
- 3390 **QWalk: A quantum Monte Carlo program for electronic structure**
L.K. Wagner, M. Bajdich and L. Mitas
- 3405 **A rapid boundary perturbation algorithm for scattering by families of rough surfaces**
D.P. Nicholls
- 3421 **A discrete action principle for electrodynamics and the construction of explicit symplectic integrators for linear, non-dispersive media**
J.M. McMahon, S.K. Gray and G.C. Schatz
- 3433 **On the accuracy of the rotation form in simulations of the Navier–Stokes equations**
W. Layton, C.C. Manica, M. Neda, M. Olshanskii and L.G. Rebholz
- 3448 **A constrained finite element method satisfying the discrete maximum principle for anisotropic diffusion problems**
D. Kuzmin, M.J. Shashkov and D. Svyatskiy
- 3464 **Compressive sensing for multi-static scattering analysis**
L. Carin, D. Liu, W. Lin and B. Guo
- 3478 **Finite difference methods for approximating Heaviside functions**
J.D. Towers
- 3490 **A Jacobian-free Newton–Krylov algorithm for compressible turbulent fluid flows**
T.T. Chisholm and D.W. Zingg
- 3508 **Stability of operator splitting methods for systems with indefinite operators: Advection–diffusion–reaction systems**
D.L. Ropp and J.N. Shadid
- 3517 **Explicit multi-symplectic methods for Klein–Gordon–Schrödinger equations**
J. Hong, S. Jiang and C. Li
