Vagg (Australia)

**Aims and Scope.** Part B will publish review articles in all areas of coordination chemistry, including inorganic solid state chemistry, organometallic chemistry and bioinorganic chemistry, as well as applications to analytical chemistry, catalysis, industrial chemistry and materials science. Articles may focus primarily on the metal, the ligand or the application. Given the limitation in length for the reviews, two extreme cases can be envisaged. Topics of emerging interest should be developed fully from the basics forward. Careful attention must be paid to the way in which the new area relates to the field in general. Reviews of well-established subjects should collect the developments from the literature and take a critical view of recent activities
