**Aims and Scope.** The *Journal of Coordination Chemistry* publishes the results of original investigations involving the physical and chemical properties, syntheses and structures of coordination compounds of metals. Its scope may be defined as being concerned with the interactions of organic and inorganic ligands with metallic elements. Material on applications of coordination compounds may be included when relevant from time to time. Short reviews of current research in coordination chemistry will also be considered for publication. In addition to full articles, preliminary communications of results (up to 1000 words) may be submitted. The journal intends to shorten considerably the time between receipt, acceptance and publication of such articles in order to provide a mechanism for speedy publication of preliminary accounts of original and significantly interesting findings in coordination chemistry. Short articles that lack urgency are also acceptable to the journal and will be published in due course, as long as the desire to avoid multiple publication is met. Books for review should be sent to the Editor, at the address above, and not the publisher.

## Section B: Reviews
